# BANNER GONZALES

## PRINCIPAL ENGINEER | AI & DISTRIBUTED SYSTEMS

Lima 15047, Peru | bannergz1999@gmail.com | +51 994 486 755 | linkedin.com/in/bannergz | bannergonzales.com

## SUMMARY

Principal Engineer with 8+ years building high-traffic fintech platforms and 5+ years leading engineering teams, now shipping generative and agentic AI to production. At YaVendio I lead a team of 10 engineers behind a conversational-commerce platform where LLM agents sell on WhatsApp, and I define the architecture guidelines and engineering standards the team ships with. Previously Technical Lead at Yape (BCP, Credicorp group), where I led four teams of 10 to 13 engineers on products used by millions of users in a regulated banking environment. I bring distributed-systems rigor (durable execution, idempotency, observability and evaluation gates) to LLM systems so they stay reliable, measurable and cost-controlled.

- **Production LLM systems:** agentic workflows, tool calling, multi-agent orchestration, RAG and MCP; long-running agent workflows on Temporal durable execution; multi-provider model routing through an LLM gateway (LiteLLM).
- **Evaluation & AI observability (AgentOps / LLMOps):** golden datasets and simulated-customer evaluations as release gates; LLM tracing with Langfuse and OpenTelemetry, so AI changes ship against a measured baseline.
- **Technical leadership & engineering standards:** architecture guidelines (C4, DDD), scaffolds and reusable components adopted as organization-wide standards; spec-driven development; developer portal and architecture as code.
- **Bank-grade distributed systems:** event-driven payments, idempotency, high availability and regulated, compliance-critical environments.

## KEY ACHIEVEMENTS

- 5+ years leading engineering teams of 10 to 13 engineers: four teams at Yape (BCP) and one at YaVendio.
- Led the design of event-driven payment services at Yape (BCP), used by millions of users.
- Drove adoption of agentic AI workflows across the whole company (19 people): merged PRs per month grew 8x, from under 400 in January to over 3,100 in August 2026.
- Cut the first load of Yape's promotions landing page (1,000+ promotions) from 25 to 5 seconds.
- Aggregated 60+ internal services into a developer portal with automated documentation-health scoring.
- Authored the Rust microservice scaffold (hexagonal architecture), adopted as the fleet standard.
- Revert rate on merged PRs down from 1.0% to 0.24% (Jan to Jun vs Jul to Oct 2026) while monthly merges grew 8x.

## PROFESSIONAL EXPERIENCE

**PRINCIPAL ENGINEER, YaVendio** **Jun 2026 to Present**

Lima, Peru

- Lead a team of 10 engineers and define architecture guidelines (C4, DDD) for 36+ APIs across a fleet of Rust, TypeScript (Next.js), Python and Go services on Azure and AWS.
- Ship production generative AI features for a conversational-commerce platform where LLM agents run sales conversations on WhatsApp for 600+ active merchants.
- Build long-running agent workflows on Temporal durable execution, applying idempotency and retry-safety to LLM tool calls so conversations survive provider errors and deploys.
- Contribute to behavioral evaluation of AI agents (golden datasets, simulated-customer runs) used as a quality gate before agent changes reach production.
- Instrument services and LLM calls end to end with OpenTelemetry, SigNoz, Langfuse and Sentry; lead the resolution of critical incidents in high-concurrency systems.
- Contributor to and power user of the internal agentic AI harness (Claude Code skills, subagents and pre-execution safety guards), rolled out to all 19 people in the company under least-privilege rules.
- Hardened the delivery pipeline with the pieces I built: ya-architecture-design (a Claude Code skill that makes every change declare its architecture level before code exists), the developer portal, ya-docs and the shared platform-actions CI; since then the revert rate on merged PRs fell 4x and the public status page has had no incidents since Aug 24, 2026.
- Built a self-updating developer portal aggregating docs and OpenAPI specs for 60+ services, with documentation-health scoring and SSO; architecture-as-code (C4) validated in CI on every change.
- Authored the Rust microservice scaffold (hexagonal architecture), adopted as the fleet standard; in platform-actions, cut the SDK-generator pipeline from about 10 min to 2 min per push and the developer-portal build from 4m52 to under a minute, and brought cargo-deny to green across 13 gated Rust repos.

**SOFTWARE TECHNICAL LEAD, Yape (BCP)** **Nov 2022 to Mar 2026**
Lima, Peru

- Insourced by Yape from Globant on the strength of my performance; kept leading Backoffice and then, in succession, the Cashflow, Connect and Promotions teams (10 to 13 engineers each) at BCP's mobile wallet (Credicorp group).
- Cut the first load of the promotions landing page (1,000+ promotions with per-segment business rules) from 25 seconds to between 4 and 5 by replacing a single-key Redis load with Algolia search, serving images from the DatoCMS CDN and lazy-loading the embedded WebView.
- Designed solution architectures with the C4 Model and DDD and microservices principles.
- Owned 19+ APIs in a microservices architecture integrated with BCP's financial systems.
- Designed event-driven solutions for processing financial transactions.
- Defined architectural guidelines for cross-organizational teams.
- Built backend services with Spring Boot, Quarkus and Node.js, deployed on Azure.
- Ensured observability of critical systems with Dynatrace, Datadog, Grafana, Kibana and PagerDuty.
- Led the resolution of critical production incidents in high-concurrency, high-availability systems (99.95% uptime).

**SOFTWARE TECHNICAL LEAD, Globant Perú** **Jan 2021 to Nov 2022**
Lima, Peru

- Led Yape's Backoffice team (10 engineers), responsible for core capabilities of the Yape ecosystem.
- Designed and built financial microservices on Azure for critical customer experience (CX) functionality.
- Designed high-volume transactional REST APIs and built 15+ business APIs on microservices.
- Applied clean, decoupled architecture patterns, integrated with the bank's core systems.
- Monitored products with Dynatrace and Kibana.

**SOFTWARE APPLICATION JAVA DEVELOPER, NTT DATA** **Feb 2020 to Jan 2021**
Lima, Peru

- Led the technical team on BCP projects (credit-card payments, challenge-based authentication and enrollment flows), meeting quarterly goals.
- Built, tested and delivered reactive applications on Azure, owning 10+ microservice APIs.
- Resolved incidents and planned and tracked the roadmap.

**SOFTWARE UNIVERSITY PRACTICES, IBM** **Apr 2019 to Feb 2020**
Lima, Peru

- Built Java backend services and REST APIs integrated with corporate systems and databases.
- Automated server-delivery tasks with RPA bots (Automation Anywhere).

## EDUCATION

**UNIVERSIDAD TECNOLÓGICA DEL PERÚ** **May 2016 to Dec 2019**
Bachelor in Systems Engineering, Lima

## SKILLS

**LLM & agents:** generative AI, agentic workflows, multi-agent orchestration, tool calling, RAG, MCP (Model Context Protocol), LangGraph, LangChain, Claude API, Claude Code (skills, subagents, hooks), LiteLLM, prompt engineering, spec-driven development
**Evals & observability (AgentOps / LLMOps):** LLM evaluation, golden datasets, simulated-user evals, Langfuse, OpenTelemetry, SigNoz, Sentry, Grafana, Datadog, Dynatrace
**Backend & distributed systems:** Rust, Java, TypeScript, Python, Go; Spring Boot, Quarkus, NestJS, Next.js, React; Temporal, Kafka, RabbitMQ, Redis, Algolia; SQL (PostgreSQL, Oracle, SQL Server), MongoDB, Cosmos DB; event-driven architecture, DDD, hexagonal architecture, REST/GraphQL API design
**Cloud & platform:** Azure, AWS, Docker, Git, GitHub Actions, CI/CD pipelines, Kong API Gateway, Testcontainers, continuous benchmarking, C4 architecture as code
**Leadership & delivery:** technical team leadership, engineering standards and architecture guidelines, agile (Scrum, Kanban), roadmap planning, incident management, TDD/BDD, Design Thinking
**Management & collaboration tools:** Jira, Confluence, Trello, Miro, Postman

## LANGUAGES

Spanish (native), English (professional working proficiency)
