

BANNER GONZALES

SOFTWARE ARCHITECT | TECHNICAL LEAD

Lima 15047, Peru | bannergz1999@gmail.com | 994486755 | [LinkedIn](#)

Technical lead and software architect with proven experience in building robust and scalable solutions for the fintech sector. I have led the design and implementation of architectures used by millions of users, developed over 20 enterprise APIs, and optimized processes, achieving efficiency improvements of up to 250%. I am an expert at transforming complex challenges into efficient and resilient architectures, providing strategic vision and technological innovation to organizations focused on excellence and digital transformation.

PROFILE

Systems Engineer with over 8 years of experience leading teams and designing software architectures for high-traffic financial platforms. Specialist in microservices, event-driven systems, and scalable cloud solutions. Proven experience in technical leadership, defining critical architecture, resilience, observability, and engineering best practices (DDD, Clean Architecture, TDD). Strong focus on scalability, performance, and resilience in distributed systems.

ACCOMPLISHMENTS

- Design and implementation of technological solutions used by millions of users on Yape.
- Technical leadership in high-volume financial systems.
- Development of more than 20 enterprise APIs using microservices architecture.
- Implementation of resilient and observable architectures for critical systems.
- 5x optimization of applications and products.
- 250% efficiency improvement in the customer service process.

PROFESSIONAL EXPERIENCE

SOFTWARE TECHNICAL LEAD, Yape

Nov 2022 to March 2026

Lima

- Technical leadership of an engineering team responsible for multiple capabilities of the Yape ecosystem used by millions of users.
- Design of solution architectures using the C4 Model and principles of DDD and microservices architecture.
- Responsible for more than 19 APIs in microservice architecture integrated with BCP's financial systems.
- Design of event-driven solutions for processing financial transactions.
- Implementation of backend services with Spring Boot, Quarkus, and NodeJS.
- Definition of architectural guidelines for cross-organizational teams.
- Monitoring and observability of critical systems using Dynatrace, Datadog, Grafana, Kibana, and PagerDuty.
- Resolution of critical production incidents in high-availability and high-concurrency systems.

SOFTWARE TECHNICAL LEAD, Globant Perú

Jan 2021 to Nov 2022

Lima

- Technical leadership of the team responsible for core capabilities of the Yape ecosystem.
- Design and development of financial microservices for critical customer experience (CX) functionalities.
- Product monitoring using Dynatrace and Kibana tools.
- Design of REST APIs for high-volume transactional services.
- Development of more than 15 business APIs using microservices architecture.
- Implementation of clean and decoupled architectural patterns.
- Integration with the bank's core financial systems.

SOFTWARE APPLICATION JAVA DEVELOPER, NTT DATA

Feb 2020 to Jan 2021

Lima

- Technical team leader at BCP, achieving quarterly project goals with functionalities such as credit card payments, challenge-based authentication, and enrollment flows.
- Development, testing, and delivery of reactive applications.
- Product analysis and definition based on microservices architecture.
- Incident resolution.
- Roadmap planning and monitoring.
- Presentation on workflow improvements.
- Responsible for more than 10 APIs with microservices architecture.

- Development of backend services in Java.
- Integration with enterprise systems and corporate databases.
- Development of REST APIs for internal applications.
- Participation in technology modernization projects.
- Development of custom bots using the RPA Automation Anywhere tool to automate server delivery process tasks.

EDUCATION

UNIVERSIDAD TECNOLÓGICA DEL PERÚ
BACHILLER EN INGENIERIA DE SISTEMAS, Lima

May 2016 to Dec 2019

AREAS OF EXPERTISE

- | | | | |
|--------------------------------------|---------------------------------|------------------------------|---|
| • Microservices Architecture | • Event-Driven Architecture | • Domain Driven Design (DDD) | • Leadership |
| • Payments High Concurrency Services | • Escalable Distributed Systems | • Observability Tools | • SQL Databases (PostgreSQL, SQL Server, DB2, Oracle) |
| • Non SQL (CosmosDB, MongoDB) | • TDD/BDD | • DevOps CI/CD | • Agile Methodology |
| • Design Thinking | • BIAN / C4 Modeling | • Clean Architecture | • API Design (REST/GraphQL) |

TECHNICAL PROFICIENCIES

Cloud:	Azure, AWS
Programming Languages:	Java, NodeJS
ORM:	Prisma, Hibernate, Flyway, Java Persistence API
DB Migration:	Flyway, Prisma Migrate
Frameworks:	Spring Boot, Quarkus, NestJS
Observability:	Grafana, Dynatrace, PagerDuty, Kibana, Datadog
Paradigm:	Reactive Programming, Functional Programming
Caching	Redis, Caffeine

LANGUAGES

Spanish (Native), English (Proficient)
