

BANNER GONZALES

SOFTWARE ARCHITECT | PRINCIPAL ENGINEER | AI

Lima 15047, Peru | bannergz1999@gmail.com | +51 994 486 755 | [linkedin.com/in/bannergz](https://www.linkedin.com/in/bannergz) | bannergonzales.com

Principal Engineer and software architect specializing in fintech, with proven expertise in building robust, scalable solutions and the developer platforms and AI workflows that engineering teams run on. I have architected systems serving millions of users, developed 20+ enterprise APIs, optimized processes achieving 250%+ efficiency gains, and improved engineering delivery efficiency by 300% through agentic AI workflows.

Core strengths:

- Agentic Orchestration & AI: Designing autonomous workflows and multi-agent systems leveraging Claude AI for complex problem-solving.
- Spec-Driven Development: Implementing OpenSpec methodologies to ensure specifications drive architecture and implementation.
- Platform Engineering & Developer Experience: Developer portals, architecture as code (C4 Model), service scaffolds, and continuous performance benchmarking adopted as organization-wide standards.
- Fintech Expertise: Payment systems, distributed architecture, and compliance-critical environments.

Passionate about transforming complex technical challenges into resilient, efficient solutions and providing strategic innovation for organizations pursuing digital transformation.

PROFILE

Systems Engineer with over 8 years of experience architecting high-traffic financial platforms, now building the developer platforms and AI workflows that engineering teams run on. Principal Engineer at YaVendio, working across a polyglot fleet of Rust, TypeScript, and Python services. Previously Technical Lead at Yape, where I led the design of microservices and event-driven systems serving millions of users within the BCP financial ecosystem. Proven experience in technical leadership, defining critical architecture, resilience, observability, and engineering best practices (DDD, Clean Architecture, Hexagonal Architecture, TDD). I work where distributed-systems rigor meets agentic AI: spec-driven development, multi-agent workflows, and platforms that make teams measurably faster.

ACCOMPLISHMENTS

- Design and implementation of technological solutions used by millions of users on Yape.
- Technical leadership in high-volume financial systems.
- Development of more than 20 enterprise APIs using microservices architecture.
- 60+ internal services aggregated into a self-updating developer documentation portal with automated documentation-health scoring.
- Continuous performance benchmarking introduced across production services and codified as an organization-wide engineering standard.
- Rust microservice scaffold with hexagonal architecture authored and adopted as the fleet standard.
- 300% efficiency gain in engineering delivery through agentic AI workflows.
- Implementation of resilient and observable architectures for critical systems.
- 5x optimization of applications and products.
- 250% efficiency improvement in the customer service process.

PROFESSIONAL EXPERIENCE

PRINCIPAL ENGINEER, YaVendio

Jun 2026 to Present

Lima

- Technical leadership of an engineering team responsible for multiple platform capabilities.
- Built a self-updating developer portal aggregating documentation and OpenAPI specifications across 60+ internal services, with automated documentation-health scoring and SSO-gated access.
- Designed an authenticated architecture-documentation platform with C4 modeling, validated in CI on every change.
- Authored the organization's Rust microservice scaffold (hexagonal architecture, persistence, observability bootstrap, and container-based integration testing), adopted as the fleet standard.
- Introduced continuous performance benchmarking across three production services and codified it as an organization-wide engineering standard.

- Contributor to and power user of the internal agentic AI harness (skills, subagents, and safety hooks for Claude-based workflows) used across the engineering organization.
- Created ya-architecture-design, a Claude Code skill that declares a change's architecture level before any code exists and applies the coupling ladder and the ten questions from my public software architecture atlas.
- Responsible for more than 36 APIs in a microservices architecture and definition of architectural guidelines (C4 Model, DDD) for cross-organizational teams.
- Daily delivery across a polyglot fleet of Rust, TypeScript (Next.js), Python, and Go services, spanning backend, frontend, and infrastructure.
- Monitoring and observability of critical systems using SigNoz, OpenTelemetry, Langfuse, Grafana, and Sentry, and resolution of critical production incidents in high-availability, high-concurrency systems.

SOFTWARE TECHNICAL LEAD, Yape

Nov 2022 to Mar 2026

Lima

- Technical leadership of an engineering team responsible for multiple capabilities of the Yape ecosystem used by millions of users.
- Design of solution architectures using the C4 Model and principles of DDD and microservices architecture.
- Responsible for more than 19 APIs in microservice architecture integrated with BCP's financial systems.
- Design of event-driven solutions for processing financial transactions.
- Implementation of backend services with Spring Boot, Quarkus, and NodeJS.
- Definition of architectural guidelines for cross-organizational teams.
- Monitoring and observability of critical systems using Dynatrace, Datadog, Grafana, Kibana, and PagerDuty.
- Resolution of critical production incidents in high-availability and high-concurrency systems.

SOFTWARE TECHNICAL LEAD, Globant Perú

Jan 2021 to Nov 2022

Lima

- Technical leadership of the team responsible for core capabilities of the Yape ecosystem.
- Design and development of financial microservices for critical customer experience (CX) functionalities.
- Product monitoring using Dynatrace and Kibana tools.
- Design of REST APIs for high-volume transactional services.
- Development of more than 15 business APIs using microservices architecture.
- Implementation of clean and decoupled architectural patterns.
- Integration with the bank's core financial systems.

SOFTWARE APPLICATION JAVA DEVELOPER, NTT DATA

Feb 2020 to Jan 2021

Lima

- Technical team leader at BCP, achieving quarterly project goals with functionalities such as credit card payments, challenge-based authentication, and enrollment flows.
- Development, testing, and delivery of reactive applications.
- Product analysis and definition based on microservices architecture.
- Incident resolution.
- Roadmap planning and monitoring.
- Presentation on workflow improvements.
- Responsible for more than 10 APIs with microservices architecture.

SOFTWARE UNIVERSITY PRACTICES, IBM

Apr 2019 to Feb 2020

Lima

- Development of backend services in Java.
- Integration with enterprise systems and corporate databases.
- Development of REST APIs for internal applications.
- Participation in technology modernization projects.
- Development of custom bots using the RPA Automation Anywhere tool to automate server delivery process tasks.

EDUCATION

UNIVERSIDAD TECNOLÓGICA DEL PERÚ

May 2016 to Dec 2019

BACHELOR IN SYSTEMS ENGINEERING, Lima

AREAS OF EXPERTISE

- | | | | |
|--------------------------------------|--------------------------------|------------------------------|---|
| • Microservices Architecture | • Event-Driven Architecture | • Domain Driven Design (DDD) | • Leadership |
| • Payments High Concurrency Services | • Scalable Distributed Systems | • Observability Tools | • SQL Databases (PostgreSQL, SQL Server, DB2, Oracle) |
| • NoSQL (CosmosDB, MongoDB) | • TDD/BDD | • DevOps CI/CD | • Agile Methodology |
| • Design Thinking | • BIAN / C4 Modeling | • Clean Architecture | • API Design (REST/GraphQL) |
| • Spec Driven Development | • AI Validations | • SOLID Principles | • ACID Principles |
| • Hexagonal Architecture | • Agentic AI Workflows | • Multi-Agent Orchestration | • Platform Engineering & DevEx |

TECHNICAL PROFICIENCIES

- | | |
|---|--|
| Cloud & Infrastructure: | AWS, Azure, Docker, GitHub Actions, Kong API Gateway |
| Programming Languages: | Rust, TypeScript, Java, Python, Go, NodeJS |
| ORM: | Prisma, Hibernate, Java Persistence API |
| DB Migration: | Flyway, Prisma Migrate |
| Frameworks: | Spring Boot, Quarkus, NestJS, Next.js, React |
| Messaging & Workflows: | Apache Kafka, RabbitMQ, Temporal (Durable Execution), Schema Registry |
| Observability: | OpenTelemetry, SigNoz, Grafana, Datadog, Dynatrace, Kibana, PagerDuty, Sentry, Langfuse |
| Paradigm: | Reactive Programming, Functional Programming |
| JVM Reactive: | RxJava, WebFlux |
| Testing: | Jest, JUnit5, Mockito, SonarQube, Checkstyle, Testcontainers, Fortify, Continuous Benchmarking |
| Caching: | Redis, Caffeine |
| AI Workflows: | Agentic Workflows, Multi-Agent Orchestration, Claude / LLM Integration, Claude Code (Skills, Subagents, Hooks), MCP (Model Context Protocol), LangChain, LangGraph, RAG, Spec-Driven Development |
| AI Validations & Integrations: | Security Gaps, AI Code Review, Docs MCPs, Scraping with Playwright |
